

Natural Gas Filters

Balston Compressed Gas Filters

Balston high flow rate compressed gas filters offer exceptionally high efficiency coalescing filtration of compressed gas at high flow rates. Specifically designed to remove suspended liquids and dirt from pipeline natural gas, the housings are ASME Code Stamped up to 1440 psig (100 barg). Equipped with Balston Microfibre® Grade DX Disposable Filter Cartridges, the filters are rated at 93% retention of 0.01 micron.

Product Features

- Pressure rating to 1440 psig (100 barg)
- Meets US and Canadian codes for natural gas filters
- Flow rates to 183 million standard cubic feet per day
- High efficiency removal of suspended liquid and solid impurities

Balston Compressed Gas Filters

Balston high flow rate compressed gas filters offer exceptionally high efficiency coalescing filtration of compressed gas at high flow rates. Specifically designed to remove suspended liquids and dirt from pipeline natural gas, the housings are ASME Code Stamped up to 1440 psig. Equipped with Balston Microfibre® Grade DX Disposable Filter Cartridges, the filters are rated at 93% retention of 0.01 micron and essentially 100% retention of 5 micron liquid droplets and particles.

Since the coalesced liquid drains continuously from the filter cartridges as rapidly as it is collected, the filters have an unlimited capacity for liquid removal.

Each filter cartridge is mounted on a rigid permanent filter holder with a vibration-resistant removable tube retainer. The filter cartridge is self-gasketing, and the filter holder is designed so that a perfect seal is easily made, even when the tube is replaced by an operator unfamiliar with the equipment.

Series AKH, and AHC housings are available with inlet and outlet ports covering the range from 2" to 10" pipe sizes. The standard carbon steel units have pressure ratings from 665 to 1440 psig (46 to 99 barg).

Each AHC assembly is equipped with internal support cores and one set of filter cartridges. Also available is a complete line of stainless steel filter housings ASME code stamped for a rated maximum operating pressure of 200 psig (14 barg).

Notes

1 Vessel is ASME Section VIII, Div. 1 code stamped for rated pressure.
 2 All vessels are constructed of carbon steel with Type 303 stainless steel filter cartridge holders and Buna-N seals.
 3 Maximum operating temperature of carbon steel vessel is 650°F (343°C). Minimum operating (process and ambient) temperature is -20°F (-30°C).

Max. Temp.

250°F (121°C)
 400°F (204°C)
 500°F (260°C)
 4 Model 20-211 drain is installed on all AKS housings. Maximum operating pressure for the 20-211 drain is 400 psig (28 barg).
 5 Differential Pressure Indicator and Auto-

Seal Material

Buna
 Viton
 Silicone

matic Drain are not included with AHC and AKH Assemblies. Series AHC Assemblies are equipped with internal support cores and one set of filter cartridges.

6 ANSI Flange Classes:

AKH Series: 300 lbs. (136 kg) R.F.S.O.
 AHC Series: 600 lbs. (273 kg) R.F.S.O.

7 Dimensions are height x width x center of flange-to-floor height.

*Closure Abbreviations:

SD: Screw type closure with Buna N "O" ring
 FSO: Flat (flanged) top with swing bolts and Buna N "O" ring.

Notes:

8 To order filter cartridges, indicate Grade by putting appropriate letters after size designation. For example, to order Grade DX cartridges for KS-0280-3 housing, order 200-80-DX. Microfibre Filter Cartridges are sold in boxes of 10.

9 Vessel is ASME Section VIII, Division 1 code stamped for rated pressure at 200°F (93°C). Maximum pressure ratings are for temperatures to 200°F (93°C). Please consult factory for maximum pressure ratings at elevated temperatures.

10 All dimensions are approximate. Request certified drawing for installation dimensions.

11 Requires element retainer #27900, one for each cartridge. Order separately.

12 All flanges are ANSI 150#RFSSO.

13 20-211 Auto Float Drain, 20-440 Auto Electric Solenoid Drain.

Natural Gas Filters

Low Pressure Natural Gas Filters

New LF/FF Series Multiple Cartridge Filter Assemblies

These filter assemblies provide high efficiency filtration of gas at very high flow rates. With inlet and outlet ports accommodating 3" to 10" pipe sizes, the new LF/FF Series housings are capable of flow rates up to a maximum capacity of 37,350 SCFM (63,450 m³/h) at 100 psig (7 barg). The standard carbon steel units, which are generally in stock (through 6" line sizes), have pressure ratings up to 250 psig.

All LF/FF series housings are ASME Code Stamped for the rated maximum operating pressure. All FF Series vessels have built-in legs for floor mounting. Selected models have swing bolt enclosures for easy access to the internals. The filter cartridges in all models are sealed by tightening the threaded retainer cap onto the rigid tie rod, ensuring a leak tight seal on both ends of the cartridge.

Each assembly is equipped with a carbon steel automatic float drain, differential pressure indicator, and a set of filter cartridges (except where noted).

NEW!

High Flow Coalescing Filter Media HFC Grade

Efficiency: 99.5% @ 0.5 micron

Balston's HFC media consists of two layers. The outer layer features a dense matrix of glass fibers. It provides highly efficient coalescing aerosol removal and very low pressure drop. The inner layer, or initial stage of filtration, effectively traps dirt particles, protecting and extending the life of the outer layer. A metal retainer is used for strength and stability. This media is used in bulk coalescing applications and when relatively high efficiency and low pressure drop are required.

High Efficiency Coalescing Media HEC Grade

Efficiency: 99.97% @ 0.01 micron

Air Flow: Inside to Outside

This coalescing element is composed of an epoxy saturated borosilicate glass micro-fiber tube. The HEC grade filter has a pleated cellulose inner layer as a built-in prefilter. This element is metal retained for added strength, and includes a synthetic fabric layer.

HEC filters are used when "total removal of liquid aerosols and suspended fines" is required. Because of its overall performance characteristics, this grade is most often recommended.

Benefits

<i>Low Pressure Drop</i>	<i>Heat and Chemical Resistant</i>
<i>Lower Change out/Labor Costs</i>	<i>No Wet Zone</i>
<i>Lower Energy Costs</i>	<i>Oleophobic/Hydrophobic</i>
<i>High Dirt Holding Capacity</i>	<i>High Burst Strength</i>

Materials of Construction

Body: Carbon Steel

Paint: Epoxy Enamel (Gray)

Internals: Epoxy powder painted carbon steel

Seals: Inorganic flange gasket (single element vessels)

Fluorocarbon o-ring (multi element vessels)

Internal Coating: Epoxy enamel

Specifications

Max Pressure: Up to 220-250 PSIG (15-17 barg)
(Consult Flow Chart)

Max Temperature: 225°F (107°C)

Meets A.S.M.E. Code, Section VIII, Division 1 code stamped for rated pressure.

Note: Consult factory for special requirements

Application Notes
